

## **How to Install ICC Profiles**

Mac: Copy the ICC profiles to [Hard Drive]: Library: Color Sync: Profiles. You will be prompted for your account password.

PC: Right click on profile and select “Install Profile”.

## **How to Load Adobe Color Settings File**

With Application open, Edit: Color Settings. Select Load... and navigate to “Bison Printing Color Settings.csf”.

Please note: the color settings references the ICC profiles, so it is better to install the profiles first.

The color settings file is configured for GRACoL 2013 Coated, which is the industry standard for sheetfed offset presses running a Grade 1 Coated Sheet. In the event you are preparing an uncoated print project, you can assign the Uncoated CMYK profile (GRACoL2013UNC\_CRPC3 V2) to your InDesign file (Edit: Assign Profile) and leave your color settings file unchanged. When you export a PDF from InDesign using the Bison Printing PDF Preset, all source color content (RGB or Lab) will be converted to the Document CMYK color space.
